

Sorting: Objects and Numbers Using partitioning.

LO: To solve problems by sorting objects and number using partitioning.

- I can use the part-part-whole model to represent numbers and objects.
- I can partition objects and numbers into group.
- I can apply my knowledge to solve problems.

Reasoning:

There are 6 children.  How many different ways can you sort the children? Use part-part whole method.

Problem-Solving:

Can you split your friends into different groups? Think of different ways to group yourselves: hair size, eye colour, gender, school bag colour, siblings?

Can you partition in more than 2 groups?
